All agencies reporting work in this field are represented on the Subcommittee. State and ICA, however, reported no personnel for this specific category.

7. This Subcommittee got off to a good start and has followed through on a constructive program for improving intelligence research in petroleum and as a medium for interagency coordination. Much of the success is due to the active participation of the interested agencies and the rapport which has been established among the specialists in this field.

8. The close cooperation and coordination among the members of the SC was clearly demonstrated in September 1957 when the SC was requested to prepare expeditiously a contribution to NIE 30-2-57. Through the concerted efforts of the major interested agencies, a contribution was drafted and approved by the SC for transmission to ONE within the short time limit allowed.

9. The SC Terms of Reference were approved in 1951, and should be revised -- along with those of all the other subcommittees -- after the EIC/S has completed its revision of "Model Terms of Reference for EIC Subcommittees."

10. The SC and its officers should be commended for their work. The SC should be encouraged in its annual review of the status of Priority Research Deficiencies and should revise this survey whenever changes in subjects and priorities warrant. Along with the other SCs, they should also consider in the review of these Deficiencies the recently revised PNEIOs.
